Word Equations Worksheet

Write the balanced equation for each of the reactions described below:

- When copper(II) sulphate reacts with sodium hydroxide:

$$\text{CuSO}_4(\text{aq}) + 2\text{NaOH}(\text{aq}) \rightarrow \text{Cu}(\text{OH})_2(\text{s}) + \text{Na}_2\text{SO}_4(\text{aq})$$
- When hydrogen gas burns in oxygen, water is formed:

$$2\text{H}_2(\text{g}) + \text{O}_2(\text{g}) \rightarrow 2\text{H}_2\text{O}(\text{l})$$
- When sodium hydroxide reacts with sulphuric acid, sodium sulphate and water are produced:

$$2\text{NaOH}(\text{aq}) + \text{H}_2\text{SO}_4(\text{aq}) \rightarrow \text{Na}_2\text{SO}_4(\text{aq}) + 2\text{H}_2\text{O}(\text{l})$$
- When sodium gas reacts with chlorine gas, sodium chloride is formed:

$$2\text{Na}(\text{s}) + \text{Cl}_2(\text{g}) \rightarrow 2\text{NaCl}(\text{s})$$
- When sodium metal reacts with water, sodium hydroxide and hydrogen gas are formed:

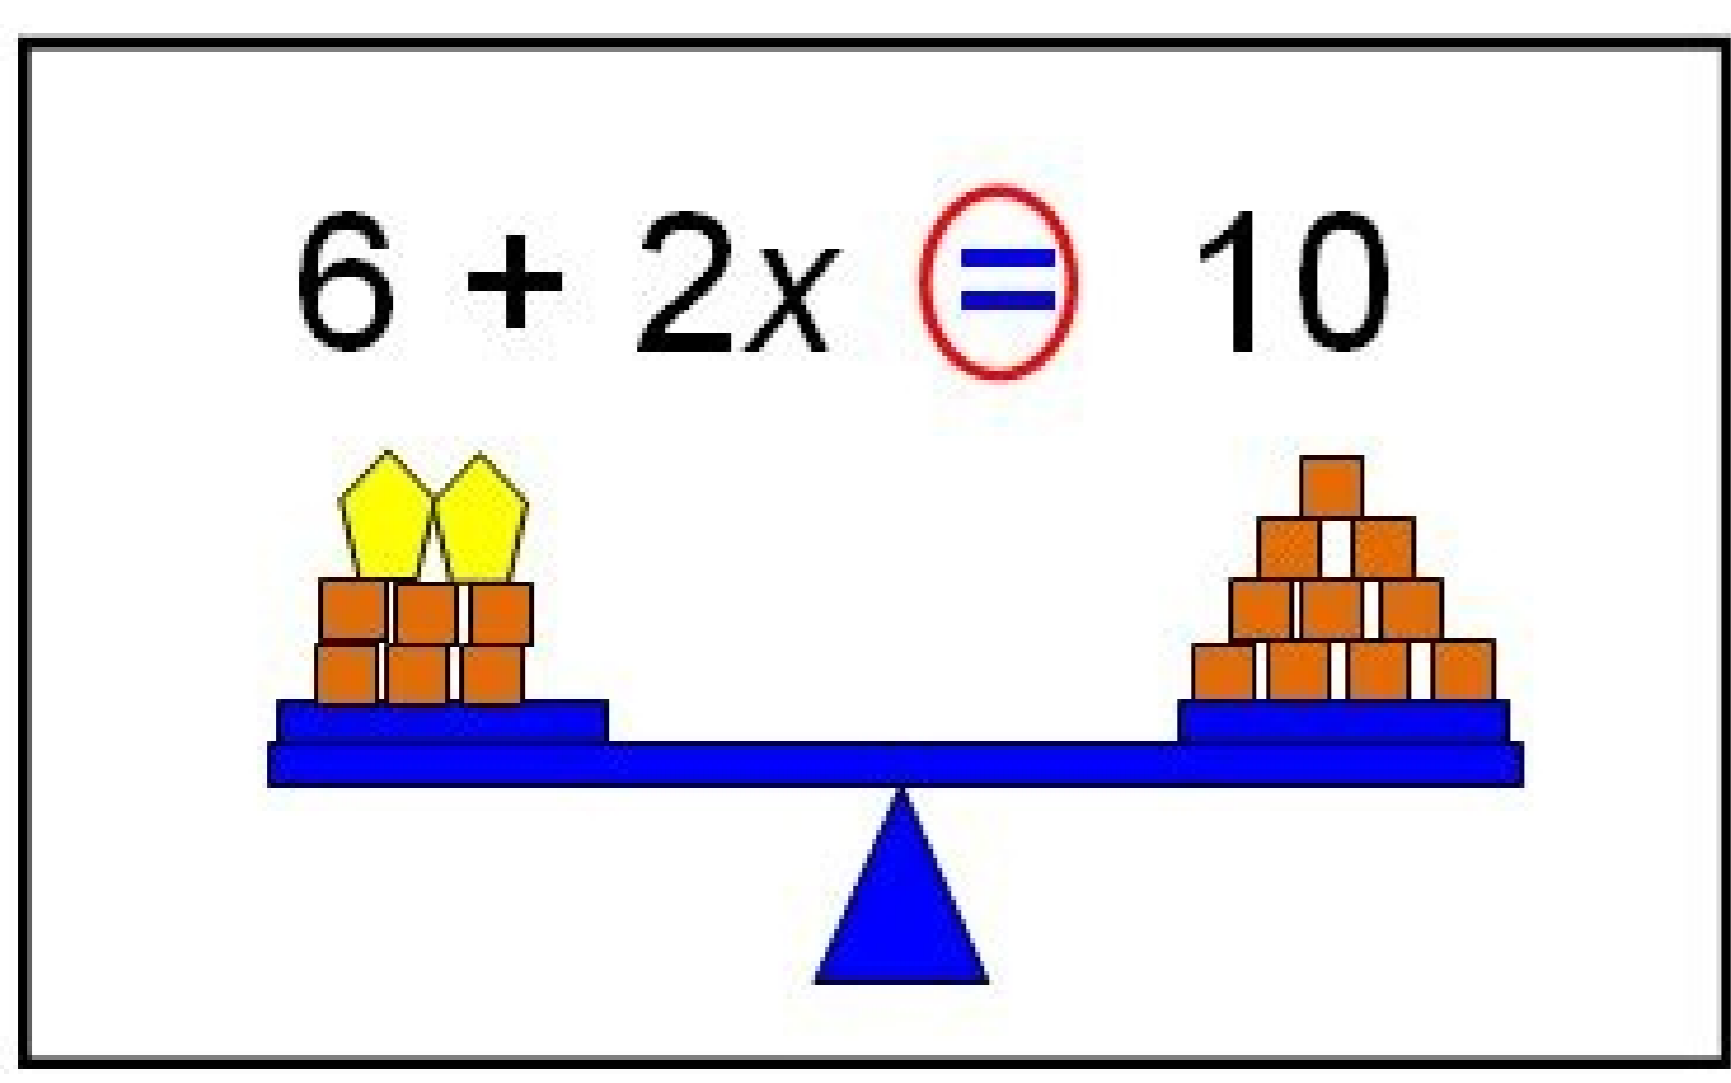

$$2\text{Na}(\text{s}) + 2\text{H}_2\text{O}(\text{l}) \rightarrow 2\text{NaOH}(\text{aq}) + \text{H}_2(\text{g})$$

Cheatography Chemical equations and reactions Cheat Sheet
 by [lotsomething](https://cheatography.com/29929/cs/8852/) via cheatography.com/29929/cs/8852/

<p>Chemical Reaction</p> <p>Whenever a chemical change occurs we can say that a chemical reaction has taken place.</p> <p>eg 1. Food gets digested in our body 2. Rusting of iron.</p>	<p>Exothermic Reactions</p> <p>Reaction in which heat is released along with the formation of products.</p> <p>eg Respiration is also exothermic reaction. Decomposition of vegetable matter into compost.</p>	<p>Endothermic Reactions</p> <p>The reactions which require energy in the form of heat, light or electricity are called Endothermic Reactions.</p> <p>$2\text{Ba}(\text{OH})_2 \cdot \text{NH}_4\text{C} \rightarrow 2\text{BaO} + \text{NH}_4\text{C}$</p>
<p>Balancing Equation</p> <p>We balance the chemical equation so that no. of atoms of each element involved in the reaction remain same at the reactant and product side.</p> <p>eg $\text{Fe} + \text{H}_2\text{O} \rightarrow \text{Fe}_2\text{O}_3 + \text{H}_2$ can be written as $3\text{Fe}(\text{s}) + 4\text{H}_2\text{O}(\text{g}) \rightarrow \text{Fe}_2\text{O}_3(\text{s}) + 4\text{H}_2(\text{g})$</p>	<p>Decomposition Reactions</p> <p>The reaction in which a single substance decomposes to give two or more substances.</p>	<p>Redox Reaction</p> <p>The reaction in which one reactant gets oxidised while other gets reduced.</p>
<p>Combination Reaction</p> <p>The reaction in which two or more substances combine to form a new single substance.</p> <p>eg $\text{CaO}(\text{s}) + \text{H}_2\text{O}(\text{l}) \rightarrow \text{Ca}(\text{OH})_2(\text{aq})$ Calcium Oxide Calcium hydroxide (slaked lime)</p>	<p>Displacement Reaction</p> <p>The reaction in which two different atoms or group of atoms are mutually exchanged.</p>	<p>Corrosion</p> <p>When a metal is attacked by substances around it such as moisture, acids etc.</p> <p>eg. Reddish brown coating on iron. (i) Black coating on Silver</p>
<p>Displacement Reaction</p> <p>The chemical Reaction in which an element displaces another element from its solution.</p>	<p>Precipitation Reaction</p> <p>Any reaction that produces a precipitate is called a precipitation reaction.</p>	<p>Rancidity</p> <p>When fats and oils are oxidised they become rancid and their smell and taste change.</p>
<p>Oxidation</p> <p>Oxidation is the gain of oxygen or loss of hydrogen.</p>	<p>Reduction</p> <p>Reduction is the loss of oxygen or gain of hydrogen.</p>	<p>Antioxidants</p> <p>Antioxidants are added to foods containing fats and oil.</p>
<p>Chemical Equation</p> <p>A chemical reaction can be expressed symbolically by using chemical equation eg. magnesium is burnt into air to form magnesium oxide can be represented as $\text{Mg} + \text{O}_2 \rightarrow \text{MgO}$</p> <p>We can observe or recognise a chemical reaction by observing change in state, colour, by evolution of gas or by change in temperature. Physical state of the reactant and products are mentioned to make chemical reaction more informative. eg. we use (g) for gas, (l) for liquid, (s) for solid and (aq) for aqueous.</p>	<p>Chemical Equation</p> <p>A chemical reaction can be expressed symbolically by using chemical equation eg. magnesium is burnt into air to form magnesium oxide can be represented as $\text{Mg} + \text{O}_2 \rightarrow \text{MgO}$</p> <p>We can observe or recognise a chemical reaction by observing change in state, colour, by evolution of gas or by change in temperature. Physical state of the reactant and products are mentioned to make chemical reaction more informative. eg. we use (g) for gas, (l) for liquid, (s) for solid and (aq) for aqueous.</p>

A mathematical sentence stating that two expressions are equal.

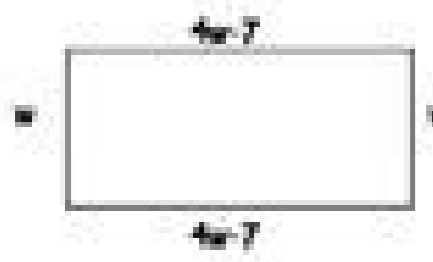

$$2.76 + 3 = 3 + 2.76$$

$$3x = 6.9$$

4.) The length of a rectangle is 2.5 times its width. The perimeter of the rectangle is 84 cm. Find the dimensions of the rectangle.

5.) The perimeter of a rectangular parking lot is 146 meters. Find the dimensions if the length is 7 meters less than 4 times the width.

6.) The length of a rectangle is 5 meters more than the width. The perimeter is 66 meters. Find the dimensions of the rectangle.

Parametric equations worksheet with answers. Parametric equations worksheet 1 answers. Parametric equations worksheet pdf. Projectile motion parametric equations worksheet. Graphing parametric equations worksheet. Second derivative of parametric equations worksheet. Precalculus parametric equations worksheet. Applications of parametric equations worksheet.

Infinite Precalculus covers all typical Precalculus material and more: trigonometric functions, equations, and identities; parametric equations; polar coordinates; vectors; limits; and more.
